

1 Profile and lock

Input + arrival traces
JDGINT1 / JDGARR1

Profile production wall
and edge/stage tails

Freeze deadline
D = 2,255.483 us

2 Place stages and edge

ResNet-50
backbone
1g MIG

802,816 B

trained head
2g MIG

shared mmap -> register mapped
local device pointers -> TRT bind

fixed 1g -> 2g plan
reserved slack = 422.385 us

3 Execute by stage state

pause + ACK
best effort

producer
execute

publish payload
+ visibility

resume BE;
consumer runs

production wall: release -> completion

4 Promote evidence

post-completion
output validation

raw replay + SHA-256
Type-7 tails + CP95

accuracy + native-port
+ thermal gates

Jetson AGX Thor: isolated MIG execution/local allocations over physically shared coherent SoC DRAM
